DETAILED ACTION

Allowable Subject Matter

Claims 7-8, 10-12 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance:

The art of record did not teach or suggest the claim taken as a whole and particular the limitation pertaining to "An audio/video system for a motor vehicle, comprising a ring-shaped, bidirectional, optical network including optical fibers and audio/video appliances connected to one another in a ring shape by said optical network, wherein data are transmitted between said audio/video appliances in said network in a first data channel configured as a MOST network having a first optical wavelength and in a second data channel configured as an Ethernet having a second optical wavelength".

With respect to independent claim 7, Broghammer et al show in a ring-shaped bus having DVD player and TV receiver connected on it and disclose the interface controller includes a MOST interface controller, and the input is designed to receive data corresponding to the MOST specification from a MOST bus. The MOST bus is a media-oriented-systems-transport-bus system, which connects decentralized components i.e., data sources and/or data sinks. The MOST bus transmits both control data and source data (i.e., graphic, audio, or measurement data). The graphic data may be transmitted compressed and uncompressed, also coded or non-coded,0014; The topology of the MOST bus is ring-shaped, with an optical connecting line 8. This connecting line 8 transmits both control data and source data, i.e., audio, video, and graphic data, via the MOST bus, among the individual components of the network. For example, in a motor vehicle the control panel 5 may be located in the vehicle at a location remote from the graphic output unit 2, the display 3, and the TV receiver 6. These components 2, 3, 6 may be controlled by the control panel 5,0020".

And Izadpanah et al disclose" a 25 MHz channel can accommodate a data bandwidth of 60-80 Mbps, while a 51 MHz channel can accommodate a data bandwidth of up to 155 Mbps,0039; different bandwidth and channel rates may be allocated to different RF

Art Unit: 2425

bands and can provide the flexibility of broadcast, multi-cast, or mono-cast communications,0052; each OWDM channel having a different OWDM wavelength,0012”.

Finally, Izadpanah et al show in fig.8, a ring structure network that is used in motor vehicle and disclose the OADMs may be used to route data to a LAN, 0048.

But Broghammer in view of Izadpanah further in view of Adams and any of cited references did not teach or suggest, alone or in combination the feature of “An audio/video system for a motor vehicle, comprising a ring-shaped, bidirectional, optical network including optical fibers and audio/video appliances connected to one another in a ring shape by said optical network, wherein data are transmitted between said audio/video appliances in said network in a first data channel configured as a MOST network having a first optical wavelength and in a second data channel configured as an Ethernet having a second optical wavelength” as recited in combination with other features of independent claim 7.

The dependent claims 8, 10-12 are allowed because are further limit independent/parents claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Broghammer et al (20020158879) disclose Graphic Output Unit and A Graphic Output System.

Izadpanah et al (20030002100) disclose Wireless Wavelength Division Multiplexed System.

Norizuki et al (20040105676) disclose Video Delivering System And Video Delivering Device For Vehicle.

Knobl et al (20010025376) disclose Audio and/or Video System, Particularly For Motor Vehicles or Home Applications.

Berkert et al (5794164) disclose Vehicle Computer System.

Grenier et al (7181511) disclose System and Method for Using Software Objects to Manage Devices Connected to a Network in a Vehicle.
